

Veloce Manual Wheelchair

SWL 120KG

The Veloce has revolutionized how people view folding wheelchairs. No longer do you have to sacrifice the ease and simplicity of a folding chair for the performance of a rigid chair. Transfers and transport are simple, and the ride is second to none. With a transport weight of only 11.98 lbs. (5.43 kg), it's the one of the lightest folding wheelchairs in the world.

The Veloce is the most technologically advanced wheelchair for active users. It redefines what a wheelchair should be by offering unrivalled lightness, rigidity and responsiveness while retaining the all-important benefits of a compact folding system. With a transport weight of only 12 lb (5.4 kg), it feels like a Formula 1 but fits in the trunk of a Mini.

It has been engineered with an entirely new type of wheelchair construction, inspired by the rigidity of box frames and the look and ride of cantilever frames. The result is a closed frame in the back to fit our Ultrarigid Folding System with a minimalist front end. You get a full menu of configuration possibilities, along with outstanding aesthetics.

With its spirited Mantis frame, signature triangular tubing and carbon fibre finish featuring colour highlights, the Veloce is truly a feast for the eyes.

Technical Specifications		
Seat Depth: 35.6 to 50.8cm	Back Height: 22.9 to 53.3cm	Seat Width: 35.6 to 50.8cm
